

Have You Got a Fully Integrated Data Strategy?

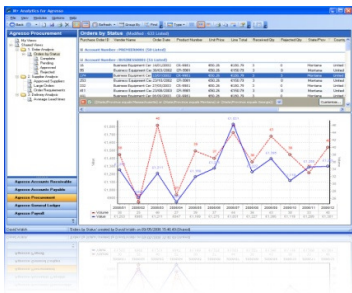

Many organisations are struggling to unlock the value of information they have accumulated over the years, be it organically or as a result of a corporate event such as an acquisition or merger.

In most cases the information required by a business user or department to support decision making exists in several data repositories.

Nathean Technologies expertise comes from over a decade supporting our clients through complex data migration and data integration projects.

We will help you create a data management strategy that is aligned to your business goals. With our expertise to access, understand and integrate your data you will gain a better capability to manage and enhance the business value derived from your current and future business applications.

"With Nathean's expertise and industry knowledge in data solutions we now have a comprehensive and cohesive view of our entire organisation. We have dramatically improved our reporting and analysis capabilities."
- Martin Allidine, Finance, Fingal County Council.

Professional Services

Data Integration

Businesses are constantly challenged to manage their data. Business insight is restricted as data resides in disparate systems and databases. Already, scarce IT resources are struggling to respond to business users increasing demands for more flexible and intelligent analyses and reporting.

"Integration remains a significant challenge for organisations" according to Maurice Lynch, CEO of Nathean Technologies. "To gain competitive advantage businesses need real time, easily accessible and easily understood data".

Every business relies on data yet its value is often neglected or under-estimated, despite being a unique asset to every organisation. Our Data Integration services can help you to get the most from your data with speed and efficiency.

Our customers operate in a wide range of sectors including financial services, utilities, local government, retail and education.

Data Migration

Data migration projects are tough – they're complex and costly – they're high risk.

The impact on the business of failed migrations is significant. Budgets are exceeded: staff morale is lowered: customer delivery and customer services can be affected, with potential damage to an organisation's reputation.

Data migration is not a core competence of most businesses but it is for Nathean Technologies. We have developed methodologies, processes, tools and techniques to help corporations migrate business critical data in a stepwise, controlled manner. By managing each step of the migration process businesses can be assured their data is migrated to auditable standards and of a successful cutover on go-live.

Business Intelligence (BI) Consultancy Services

Making the right decisions for your organisation requires timely access to accurate information. We help organisations to transform their data into actionable information and knowledge. Before deciding on the most appropriate BI solution or toolset we will assist with carrying out the following steps;

- Clearly understand your business goals and objectives
- Evaluate existing data structure and design
- Examine existing BI tools
- Discuss requirements with the business users
- Make appropriate recommendations
