

Logix4...

Logix4 is a ground-breaking Data Linking, Analysis & Reporting solution for Unit4 Business World, Financials and Dream.

In a highly competitive and fast paced market, having access to the right information at the right time can be a key factor in an organisation's ability to respond to change. Logix4 is a unique scalable and innovative solution which connects people and information every day...

The Challenges of Unlocking Data Value

There are many challenges today in maximising the value of the vast amounts of information being captured across databases, departments and projects. Not least some of the challenges include:

- **Accessing disparate data silos** in different systems and in various formats
- **Too many spreadsheets** and copies of aged data
- **Ad-hoc reporting solutions** generating multiple versions of the truth
- **Reliance on IT** support and need for super users for analysis and reporting
- **Lack of control over** published reports containing data from multiple systems

Logix4 addresses the challenges using its innovative in-memory linking and caching technology. By centralising control and linking directly to the sources of data Logix4 delivers insights in real-time and near real-time.

A distinct advantage with Logix4 is its unique approach of using configuration rather than coding which means reduced project costs and faster time-to-value.

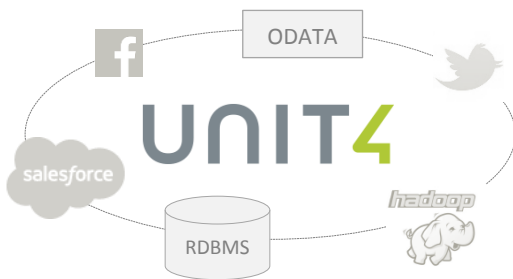

To complete the solution Logix4 includes intuitive analysis & reporting tools and ships with configurable out-of-the box metrics for Unit4 Business World, Financials, Dream and other systems.

Key Benefits of Logix4

- **Increase return on investment** from your Unit4 and other systems and unlock the value of underlying data.
- **New data sources are** easily integrated through simple configuration for greater business insights
- **Advantages of multiple hosting options** – on-premise, Cloud (including Unit4 Cloud) or hybrid.
- **Places self-service analysis** in the hands of those who know their data best
- **Radically improve time to decision** without waiting on others to generate the analysis
- **Valuable technical resources** are freed up for other value-adding tasks
- **Increases performance** through sharing actionable insights with your team, partners, suppliers and customers

"Having seen Logix4, I recommend fellow Business World users have a look at this very clever analysis and reporting tool for themselves"

– **Ian Sibbald, Director of Finance, Cranfield University**

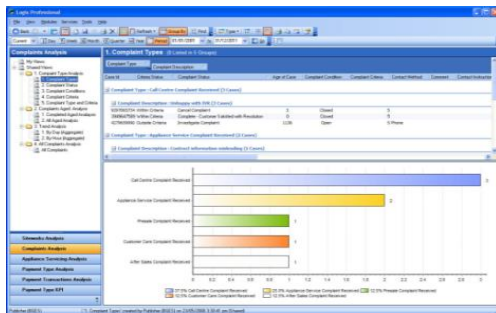

Link Any Data Source to Unit4

Experience the benefits of richer and deeper business insights through data linking and analysis. You don't need expensive data warehouses to bring data together. Logix4 Linx™ Server technology makes the most of today's powerful multi-core processors and inexpensive memory. Logix4 puts the focus on the most important metrics you need from your Unit4 and other systems.

Interactive Dashboards with Drilldown

Logix4 includes intuitive web and mobile visualisation tools. Our unique and innovative approach means dashboards can be created and published in an instant with drilldown capability to any Unit4 or linked data source. For the more technically minded, Logix4 Linx™ server can be accessed via an API for embedding visualisations or for accessing through other analysis tools.

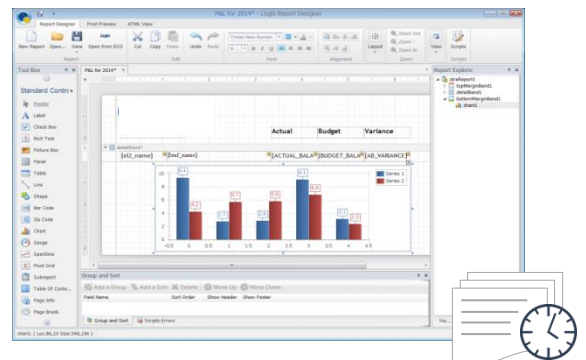

Analyse, Visualise, Share

Visualise your Unit4 data seamlessly linked in with other data sources in one secure centralised environment. With Logix4 you are always connected so no more time wasted with spreadsheets or involving overstretched IT resources for analysis and reporting. You can slice, dice, pivot, chart, filter or whatever you want to find the answers you need and share your insights instantly.

Design, Schedule, Publish

People have different needs when it comes to reporting. When scheduled pixel-perfect reports are required then Logix4 Report is the answer. The Logix4 Report Template Designer connects directly to the Logix Linx™ server which means access is fully governed, managed and auditable. Reports can be widely distributed, with confidence, via email or FTP in popular formats such as PDF and Excel.
