

Logix Agile™

Agile Business Intelligence

Challenges

Information is increasing at a rapid rate across organisations. An overwhelming number of companies are operating with blind spots and are struggling to get the right information to the right people. The increase in data has driven the need for better business processes and information management. No longer is data analysis and reporting isolated activities – business leaders are recognising the need to integrate processes and data across functions into a single point.

The Solution

Logix Agile is a complete Agile Business Intelligence Solution, delivering the full range of analysis capabilities so you can freely explore information, analyse key metrics and share results with others in the organisation. The solution is suitable for any organisation with demanding reporting, analysis and dashboard requirements.

Access to Information for Everyone from Anywhere...

Web and Dashboards

Access Key Performance Indicators (KPI's) with any web browser. Create and publish new dashboards in minutes by simply deciding which Views to add to your dashboard.

Mobile

Logix is mobile ready and can be viewed on iPads and Smartphones. Get key intelligence on the go.

Desktop

Powerful Excel-like desktop application for ad-hoc queries, pivots, drilldown and visualisation.

Excel Integration

Create rich datasets and views of information in the Logix environment which can easily be loaded and analysed in Excel and PowerPivot.

Pull Data from Multiple Sources

Logix Linx™

Logix Linx is an in-memory solution that gives you the answers to important questions with lightning fast speed. It supports the type of refresh rates demanded by today's business managers for their most essential information.

Data Apps

Logix delivers pre-packed analytics for popular ERP, Finance, HR and Payroll systems.

Business Benefits

Management by Exception

Without the right tools, managers can spend hours collecting huge amounts of data to create reports that do not give the anticipated insights. With Logix Agile, managers only spend time investigating and analysing reports that really tap into the key metrics behind the business operations.

Instant Access to Real-time Information Needed to Drive Better Decisions

Organisations invest a lot of time and resources trying to gather information from different sources and applications. However, often the data is held in disparate systems across multiple departments making access extremely difficult. Logix Agile works by providing everyone with instant access from a single point, enabling informed data-driven decisions to be made.

Maximise Corporate Performance

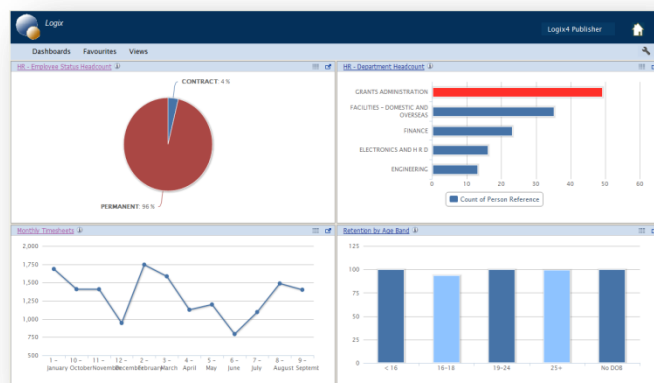

See where your business has been, where it is now and where it is going. Use proven analytical technology to track, understand and manage activities and processes. Identify potential areas of improvement and risks across functions before they become a problem.

Reduce Dependency on your IT Team and Resources

Create flexible drill-down reports and dashboards, executable at the click of a button, without calling on the IT team. Logix eliminates the process of re-writing reports and reduces the dependency on spreadsheets by up to 85% in many cases.

Agile Business Intelligence

Logix Agile is an agile solution that offers a continual data analysis process which moves with the speed of change in your organisation.

About Nathean Technologies

We are passionate about Agile Business Intelligence and have been delivering innovative data analysis and reporting solutions to customers since 2001. We want people to make better business decisions by getting access to their own data with little or no training. We are focused on simplicity, enabling users at every level in an organisation – irrespective of ability – to easily ask questions of data and get the answers they need in an instant.
