

# Logix Agile™ Datasheet

## PowerPivot Integration

### Data Feed for Excel

Logix Data Feed for Excel allows the rich datasets and views of information created in the Logix environment to be consumed by Excel using its PowerPivot add-on. Business users are free to add extra context to the core data but the organisation as a whole can have confidence in the fact that all reports, even those in Excel, are based on the same core set of powerful datasets. This helps to prevent the dangerous “multiple versions of the truth” paradigm that is all too prevalent in many organisations today.

### Conclusion

While many organisations currently have an over-reliance on spreadsheets, they still have a role to play in an Agile BI environment. Many of today’s business users have “grown-up” with Microsoft Excel and are very reluctant to move away from the incredible flexibility it provides. The key to continuing to allow them to use Excel, when warranted, is to ensure that it is done in a controlled and validated fashion.

### About Nathean Technologies

We are passionate about Agile Business Intelligence and have been delivering innovative data analysis and reporting solutions to customers since 2001. We want people to make better business decisions by getting access to their own data with little or no training. We are focused on simplicity, enabling users at every level in an organisation – irrespective of ability – to easily ask questions of data and get the answers they need in an instant.
